

the BITE

Cuda Lightweight Gaffs

Made with lightweight but incredibly strong carbon fiber shafts, Cuda's line of gaffs are nimble and easy to deploy when the action is fast. Patented stainless steel hooks are designed for a sure bite on the fish and integrated tip protectors help insure it's only the fish that get stuck. Corded grips do their job, especially when hands are wet and, our favorite feature, these gaffs float, so you'll never lose your investment to a clumsy friend or mate. Available in lengths of 4, 6 and 8 feet.

Cuda Adjustable Tag Stick

When it comes to tag and release, Cuda has anglers covered with a telescoping tag stick that stretches from 35 to 73 inches. Made from aircraft aluminum, it is lightweight and durable and the standard tag spike works with National Marine Fisheries tags (not included). A non-slip grip and lanyard system help keep the stick in hand. Pair your Tag Stick with a special connector (sold separately) and it can also be used as the ultimate camera pole.
