CUDA SABIKI RIGS DEHOOKER

Cuda Fishing Tools introduces an innovative new bait dehooker that is specifically designed for safe and easy removal of bait from Sabiki rigs. The Bait Dehooker provides no-touch operation that allows you to protect the health of the fish and protect yourself from hooks during the dehooking process. The ergonomic design features a trigger handle for rapid bait release and a 304 stainless steel dehooking mechanism for increased corrosion-resistance. The Cuda Bait Dehooker is easy to operate. Simply rest the tool against the line, slide the tool down at a slight angle, then rotate to catch the hook, squeeze the handles to release the bait, slide to the next hook and repeat. Dehooking bait has been a primitive task in the past. In many cases, anglers have used a simplistic wire-based dehooker and neither the Sabiki rig nor the bait were controlled. Now, with the Cuda Bait Dehooker, the tool grabs the hook, controls the rig

and ejects the fish directly into the bait well. Contact: Cuda Fishing Tools at 800-835-2263 or visit www.cudabrand.com.
